GROW YOUR SKILLSET AND IMPROVE THE WORKFLOW

Our Logpoint User and Administrator Training has long been popular with both new and existing users who want to grow their skillset and acquire improved routines for working with or administrating the solution on a daily basis.

Logpoint Academy Training Overview

Logpoint Academy provides a comprehensive training platform accessible to all Logpoint users, offering both free and paid courses to suit different learning needs. Through the Academy, users can choose between two flexible training formats—virtual instructor-led sessions and on-demand content—each covering the same material and equipping participants with practical Logpoint skills.

On-Demand Training:

This flexible option allows you to learn at your own pace, making it easy to fit training around a busy schedule. On-demand courses can be paused and resumed anytime, giving you control over when and how you progress through the material.

Virtual Instructor-Led Training:

Held monthly in English and every other month in German, these live, two-day sessions allow participants to interact directly with an expert instructor who tailors the content to fit the experience levels and requests of the group. This format includes real-time discussions, demonstrations of solution features, exploration of real-world use cases, and opportunities to ask questions, creating an interactive environment that supports knowledge exchange and deeper understanding among participants.

Training Focuses

PLANNING

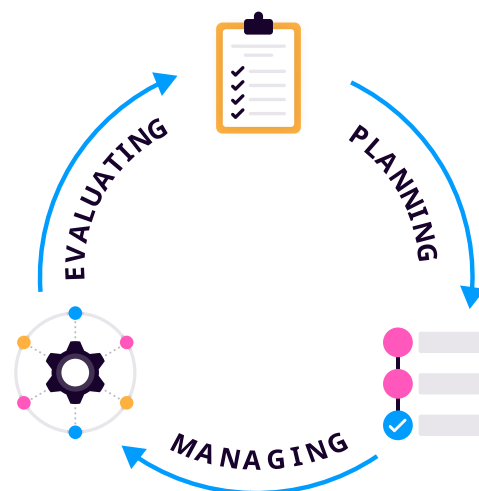

Enables you to plan the implementation and allocate required resources for the deployment process. You will learn to design reports, alerts and dashboards to best suit your Business design requirements.

MANAGING

Allows you to allocate the essential resources to manage your implementation process, and administer the solution once deployed, ensuring it remains updated and relevant on a continuous basis.

EVALUATING

Empowers you to evaluate your installation and analyze if it is providing the value needed to meet your organizational KPIs, or if adjustments are needed based on reevaluated business requirements.

CERTIFIED LOGPOINT ADMINISTRATOR AND USER TRAINING

Logpoint Administrator and Logpoint User training can be consumed together or separately. If you wish to take both courses, we recommend starting with Administrator training and then User Training for the most cohesive experience.

The training sessions may be adjusted to cater to the requests of larger groups of participants such as several participants from the same organization. Overall, we will cover general activities, such as introductions and an overview of SIEM and Logpoint. Each training section is followed by hands-on exercises in a training environment.

“Participating in Logpoint’s training has given me new insights on the functionality of the solution. I am now more aware of best practices and small tweaks, which can make a huge difference and can assist me in implementation and operational efforts. Furthermore, the knowledge shared and obtained by engaging with other training participants has not only provided me with use-case examples but also a network of other Logpoint users, which I can consult if I need a second opinion.”

– Johan Aagaard, Senior Security Advisor

Logpoint Administrator Training

- Logpoint Administrator Introduction
- Lab Environment
- Logpoint Server Setup
 - License
 - Update
 - Server Settings
 - Profile Settings
- Logpoint Help Center
- Logpoint Configuration
 - Applications
 - Repos
 - Routing Policies
 - Normalization Policies
 - Enrichment Sources
 - Enrichment Policies
 - Processing Policies
 - Log Collection Policies
 - Device Groups
- Devices
- Device Integration
 - Integrate Windows (LPA)
 - Integrate Linux (rsyslog)
- User Administration
 - Permission Groups
 - User Groups
 - User
 - Incident User Groups
 - Data Privacy Groups
- Logpoint UEBA
 - Requirements
 - Baselining and Scoring
 - Input and Output
 - Licensing
- Backup and Restore
- Snapshots
- Troubleshooting

Logpoint User Training

- Logpoint User Introduction
- Logpoint Help Center
- Lab Environment
- Dashboards
- Simple Search
 - Word/Phrase
- Search
 - Key-Value
 - Labels
 - Aggregation
 - Macros
 - Joins
 - Lists
 - Enrichment
- Search Views
- Search Templates
- Reporting
- Alerting
- Logpoint UEBA

LOGPOINT DIRECTOR TRAINING

Course description

Director Training is a specialized course focused on mastering Logpoint's central management platform for streamlined, multi-site security operations. Participants will learn to monitor the health and performance of multiple Logpoints, manage updates, and configure entities and settings—all from a single, centralized interface. The course covers key topics such as license management, conducting central searches and reporting across Logpoint pools, and utilizing both API servers and the UI for efficient, scalable control. By the end, participants will be fully equipped to oversee and optimize a distributed Logpoint environment with ease and precision.

Director training is currently only offered as virtual instructor led training in English. The sessions run once every other month and last approximately 1 full workday.

Prerequisites

- Certified LogPoint User knowledge is extremely helpful but not mandatory.
- A workstation, desktop, or laptop computer
- Remote desktop with NLA (Network Level Authentication).
- The ability to read PDF, PowerPoint, Word, and Excel documents.
- Chrome, Firefox, or Safari browser.

Course Syllabus

- Logpoint Introduction
- Director Platform
- Preparing Director and Search Master
- Connecting Logpoint to Director
- Subscription and Impersonation using LPSM
- Deploying and Managing the Logpoint Director Setup using LPSM
- Authentication Mechanisms in Director Console
- Monitoring and Administrating the Fabric enabled Logpoints using Director Console

LOGPOINT SOAR TRAINING

Course Description

This on-demand course, created by a Logpoint Certified SOAR Expert, provides an in-depth, practical introduction to the full features of the SOAR solution. Through a series of self-paced modules, participants will explore real-world applications, best practices, and learn how to design effective automation workflows for modern security challenges.

The course covers core elements such as configuring the SOAR setup, managing alerts and incidents, and creating and deploying playbooks that align with industry standards. Key topics include setting up automation flows, optimizing case management, using triggers and conditions, and integrating products across different vendors. By focusing on both foundational and advanced skills, the course equips participants to create playbooks that automate security processes, streamlining responses to threats and increasing efficiency.

All participants stand to gain valuable insight on how to set up the SOAR solution, how to integrate and configure their products in the system and how to begin automating security-focused processes by creating and designing a playbook according to industry best practices and standards that will make responding to security threats practically instantaneous and much more effective. Logpoint SOAR Training is only offered as an on-demand training session in English.

Prerequisites

- Certified LogPoint User knowledge is extremely helpful but not mandatory.
- A workstation, desktop, or laptop computer.
- Remote desktop with NLA (Network Level Authentication).
- The ability to read PDF, PowerPoint, Word, and Excel documents.
- Chrome, Firefox, or Safari browser.

Course Syllabus

- SOAR - What, Why, Where & When
- The Automation Flow - Alerts, Incidents, Playbooks, Cases
- Playbook Life Cycle - Maturity Model
- Best Practices - Tips & Tricks
- SOAR Setup & Configuration - Vendors, Products & Actions
- Playbook Trigger Types
- Running API Calls
- Playbook Testing & Development
- Using Playbooks for Auditing & Documenting
- Integrating Python Scripts
- Using Conditions and Prompts
- Case Management - Controlling Case Status
- Using JSON Filters
- Performing SIEM Queries from SOAR
- Using For Each Loops and Sub-Playbooks
- Creating Automation Triggers
- Monitoring Playbook Runtimes
- SOAR Maintenance - Export & Import

How do I register?

For inquiries regarding registration and pricing, please reach out to your local Logpoint Representative or email to customersuccess@logpoint.com

WHO SHOULD PARTICIPATE?

IT and Information Security Professionals, such as Consultants, Auditors, Managers, Engineers and Administrators.

All participants stand to gain valuable insight on how to implement, configure, and fine-tune SIEM technology. This enables the participants to automate processes, create compliance reports and documentation and reduce false positives by monitoring, identifying, documenting, and responding to security threats in a more effective way.

Prerequisites

- Work station, desktop or laptop computer
- Remote desktop with NLA (Network Level Authentication)
- The ability to read PDF, PowerPoint, Word and Excel documents
- Chrome, Firefox or Safari browser

Want to Know More?

We have a proven track record of training customers and partners to ensure they reap the benefits of their Logpoint implementation. Do you want to know more about which of our training tracks that are right for you? Please contact us for more information.

Customized Workshops

We also offer customized training for organizations which focus solely on your organizational needs and deployment. Based on experience, we can recommend a tailored agenda to suit your exact needs.

Top 6 take aways from Instructor-led training

1. Introduction to Logpoint tailored to suit the needs of the individual participants
2. Best-practices when working with the solution
3. Use-case examples from other organizations
4. Networking with other Logpoint users and exchange input
5. Input on how to manage your own or your customer's installation
6. Official Logpoint Training Certificate for each module

Top 6 take aways from on-demand training

1. Complete the training at your own pace, with the flexibility to pause and resume as needed.
2. Gain a thorough introduction to Logpoint, covering essential skills and functionalities.
3. Explore practical examples drawn from real Logpoint implementations to deepen your understanding.
4. Access guidance and best practices directly from Logpoint experts, designed to enhance your day-to-day use.
5. Learn valuable tips for managing and optimizing your own or your customer's Logpoint installation.
6. Receive an official Logpoint Training Certificate for each completed module.
